

Citron Hygiene CODE Kit

The Citron CODE Kit ('Controlled Drugs Denaturing kit') renders controlled drugs irretrievable by denaturing them in a solid resin. It is simple to use and fully compliant with all current UK waste disposal legislation.

- Provides a highly effective way of correctly and safely disposing of controlled drugs such as Diazepam, Midazolam and others
- Meets all the requirements of the Misuse of Drugs Regulations 2001, which allows authorised and trained personnel to witness the destruction of these controlled drugs
- Once rendered harmless and irretrievable the units can be disposed of in a Pharmi Bin
