

Flushing & Sanitising

Actiflush

The Actiflush can be fitted to cisterns to create a water saving mechanism. Saving up to 10L of water in a 11L cistern.

- Fits in spare flush hole of toilets and links to the siphon
- When the button is pushed, it breaks the air lock and the flush is stopped
- If the flush is stopped too early, the handle can be pushed again and the flush will continue as there is water still in the cistern
- Provides significant cost savings

Available Colours

Green or Chrome
